

Network Secure Gateway

Simplifying IT

The Network Secure Gateway provides you with the following;

Secure remote access to your networked computers and resources via the internet from anywhere in the world.

Very competitively priced and easy to configure, developed between Lode Heath School and Burconix Ltd. Designed with a school to suite school environments.

Features and advantages

- Staff and Students or just Staff can access **anything** on any PC or on the Network remotely that they would normally be able to access as long as you give them access.
- Ideal for remote working if Staff or Students are not able to make it into school or school closures, Holidays etc.
- Access to your data remotely without the data leaving your establishment less chance of data being lost or stolen.
- Seamless Dual factor Authentication using an Encrypted App, where required as well as a mixture of both.
- Can be used to replace other systems you may have in place at a fraction of the cost as it enables you to use any internal system remotely.
- Reduces the need to set-up various pieces of software or configurations on computers or laptops for remote users.
- Built in functions to start up or shutdown PC's not in use including threshold of PC's available that can be easily configured and if it gets below the threshold another PC starts up, above the threshold a PC shuts down, all this happens automatically.

Features and advantages continued..

- Some web based solutions can feel a bit unresponsive, but because the Network Secure Gateway is built to work with Windows Remote Desktop technologies the system is **instantly** responsive.
- Once logged in it works the same as if you were sitting at your PC in your establishment.
- Again because you are logging into a PC in your school or college all your Network Security is maintained.
- You can schedule the same resources (PC's) to be available to different users at different times so in essence sharing the same resources (PC'S) between multiple users at different times.
- Consistent interface with the same systems and tools that they are used to available for Staff and Students.
